This project is partially funded by the [European Commission](#) under the [7th Framework Programme](#). Grant Agreement No. 247787  
Translational Research and Patient Safety in Europe (TRANSFoRm)

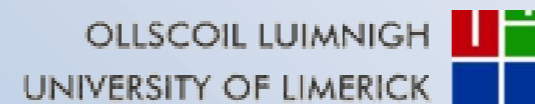

# What types of “knowledge” can support provision of healthcare?

# TRANSFoRm Consortium

[www.transformproject.eu/](http://www.transformproject.eu/)

# Aims of TRANSFoRm

- TRANSFoRm - Translational Research and Patient Safety in Europe
- To develop the infrastructure in primary care to support:
  - Epidemiological research using electronic records, including genotype-phenotype studies and other record linkages
  - Decision support to assist formulating and quantifying potential diagnoses as part of clinical consultation
  - Utilise shared infrastructure – shared models, vocabulary services, provenance services

# Shared Models in TRANSFoRm

- **Clinical Data Integration Model (CDIM)**
  - Mapping clinical data from EHRs and aggregated data repositories
- **Clinical Research Information Model (CRIM)**
  - Research process information
  - Evolution of Primary Care Research Object Model (PCROM).
- **Clinical Evidence Model (CEM)**
  - Clinical evidence upon which decision support can be derived and provided through decision support tools

Routinely  
collected  
knowledge

Specific  
research  
knowledge

Actionable  
knowledge

# Design - Evidence obtained from literature

**Table 2. Clinical Signs and Symptoms in the Prediction of Urinary Tract Infection\***

Study	Positive Likelihood Ratio (95% CI)	Negative Likelihood Ratio (95% CI)
<b>Dysuria</b>		
Gallagher et al <sup>25</sup>	1.3 (1.1-1.6)	0.3 (0.1-0.7)
Mond et al <sup>26</sup>	1.4 (1.1-1.8)	0.2 (0.1-0.7)
Lawson et al <sup>27</sup>	1.2 (1.0-1.5)	0.8 (0.6-1.0)
Nazareth and King <sup>20</sup>	1.1 (0.8-1.1)	0.6 (0.1-2.4)
Komaroff et al <sup>28</sup>	3.2 (2.7-3.7)	0.2 (0.1-0.3)
Wong et al <sup>21</sup>	3.0 (2.0-4.6)	0.5 (0.4-0.7)
Wigton et al <sup>22</sup> (training set)	1.4 (1.1-1.8)	0.7 (0.5-0.9)
Wigton et al <sup>22</sup> (validation set)	1.1 (0.8-1.4)	0.9 (0.7-1.2)
<b>Summary</b>	<b>1.5 (1.2-2.0)</b>	<b>0.5 (0.3-0.7)</b>
<b>Frequency</b>		
Gallagher et al <sup>25</sup>	1.0 (0.9-1.1)	1.6 (0.4-5.9)
Mond et al <sup>26</sup>	1.0 (0.9-1.1)	1.1 (0.2-7.8)
Lawson et al <sup>27</sup>	1.1 (1.0-1.3)	0.7 (0.4-1.0)
Dans and Klaus <sup>29</sup>	1.4 (1.0-2.1)	0.6 (0.4-1.1)
Nazareth and King <sup>20</sup>	1.0 (0.8-1.3)	0.9 (0.2-3.8)
Komaroff et al <sup>28</sup>	10.3 (7.8-13.3)	0.1 (0.0-0.2)
Wong et al <sup>21</sup>	5.2 (3.1-8.7)	0.5 (0.3-0.6)
Wigton et al <sup>22</sup> (training set)	1.8 (1.0-3.5)	0.9 (0.8-1.0)
Wigton et al <sup>22</sup> (validation set)	1.3 (0.8-2.0)	0.9 (0.8-1.1)
<b>Summary</b>	<b>1.8 (1.1-3.0)</b>	<b>0.6 (0.4-1.0)</b>

# Design - Evidence derived from coded data

<i>Diagnoses for RfE (P03) feeling depressed. Population: all</i>	The Netherlands	
	Incidence	Prevalence
<u>Rates per 1000 patient years (Episodes not pts.)</u>		
Feeling depressed (P03)	5.2	7.4
Depressive disorder (P76)	10.1	36.1
General weakness/tiredness (A04)	30.6	37.5
Acute stress reaction (P02)	5.8	7.9
Feeling anxious/nervous/tense (P01)	12.7	29.8
Neurasthenia, surmenage (P78)	4.1	6.1
Anxiety disorder/anxiety state (P74)	2.0	8.8
Relationship problem with partner (Z12)	4.8	6.9
	LR+	LR-
<u>Rfe (P03) Feeling depressed</u>		
Feeling depressed (P03)	<b>292.8 (269.4-318.2)</b>	<b>0.3 (0.3-0.3)</b>
Depressive disorder (P76)	<b>108.6 (98.1-120.1)</b>	0.7 (0.7-0.7)
General weakness/tiredness (A04)	1.9 (1.4-2.6)	1.0 (1.0-1.0)
Acute stress reaction (P02)	<b>8.0 (5.6-11.5)</b>	1.0 (1.0-1.0)
Feeling anxious/nervous/tense (P01)	<b>3.5 (2.4-5.1)</b>	1.0 (1.0-1.0)
Neurasthenia, surmenage (P78)	<b>10.4 (7.2-15.2)</b>	1.0 (1.0-1.0)
Anxiety disorder/anxiety state (P74)	<b>12.5 (7.8-20.3)</b>	1.0 (0.9-1.0)
Relationship problem with partner (Z12)	<b>5.3 (3.3-8.6)</b>	1.0 (1.0-1.0)
Black = not significant (LR+ <=2, LR- >=0.5)		
<b>Green = weak predictor (LR+ &gt;2-8, LR- 0.2-0.4, small CI)</b>		
<b>Red = strong predictor (LR+ &gt;8, LR- &lt;0.2, small CI)</b>		
Small CI is one which is smaller than the size of the observation		
<b>Those with larger CI not including 1 are put in bold italics</b>		
CI excluding unity are ignored

# Design - Clinical Prediction Rules

Little Symptom Rule	
Diagnostic Cues and Criteria	<ul style="list-style-type: none"><li>• Urine cloudiness present</li><li>• Urine smell present</li><li>• Dysuria present</li><li>• Nocturia present</li></ul>
Scoring Scheme	1 point is scored for each of the 4 criteria that are found to be true in the patient
Scoring Stratification	0 = Low risk 1-2 = Medium risk 3-4 = High risk
Decision Outcome	Low = No treatment Medium = Requires further testing High = Empirical treatment with antibiotics

**Little et al 2006** - Developing clinical rules to predict urinary tract infection in primary care settings: sensitivity and specificity of near patient tests (dipsticks) and clinical scores. *Br J Gen Pract*, 2006:606-12.

# General model of evidence

# Protégé – defining instances of knowledge

The screenshot displays the Protégé ontology editor interface. On the left, the 'Members list: UrinaryTractInfection' panel shows a list of classes, with 'UrinaryTractInfection' selected. The main workspace is divided into three panels: 'Annotations: UrinaryTractInfection' (empty), 'Description: UrinaryTractInfection' (showing 'EvidenceDiagnosis' as a type), and 'Property assertions: UrinaryTractInfection' (listing various assertions like 'hasRisk PreviousUTI', 'hasSymptom Dysuria', etc.).

**Members list: UrinaryTractInfection**

- AcuteStressReaction
- AnxietyDisorderState
- AorticStenosis
- Appendicitis
- BacterialEnteritis
- BowelCancer
- Bronchitis
- ChronsDisease
- CorPulmonale
- DepressiveDisorder
- EctopicPregnancy
- FeelingAnxiousNervous
- FeelingDepressed
- GeneralWeaknessTiredness
- IrritableBowelSynrdome
- NeurastheniaSurmenage
- Pneumonia
- Pneumothorax
- Pyelonephritis
- RelationshipProblemPartner
- Tuberculosis
- Type2Diabetes
- UrinaryTractInfection**

**Annotations: UrinaryTractInfection**

Annotations +

**Description: UrinaryTractInfection**

Types +

- EvidenceDiagnosis**

Same individuals +

Different individuals +

**Property assertions: UrinaryTractInfection**

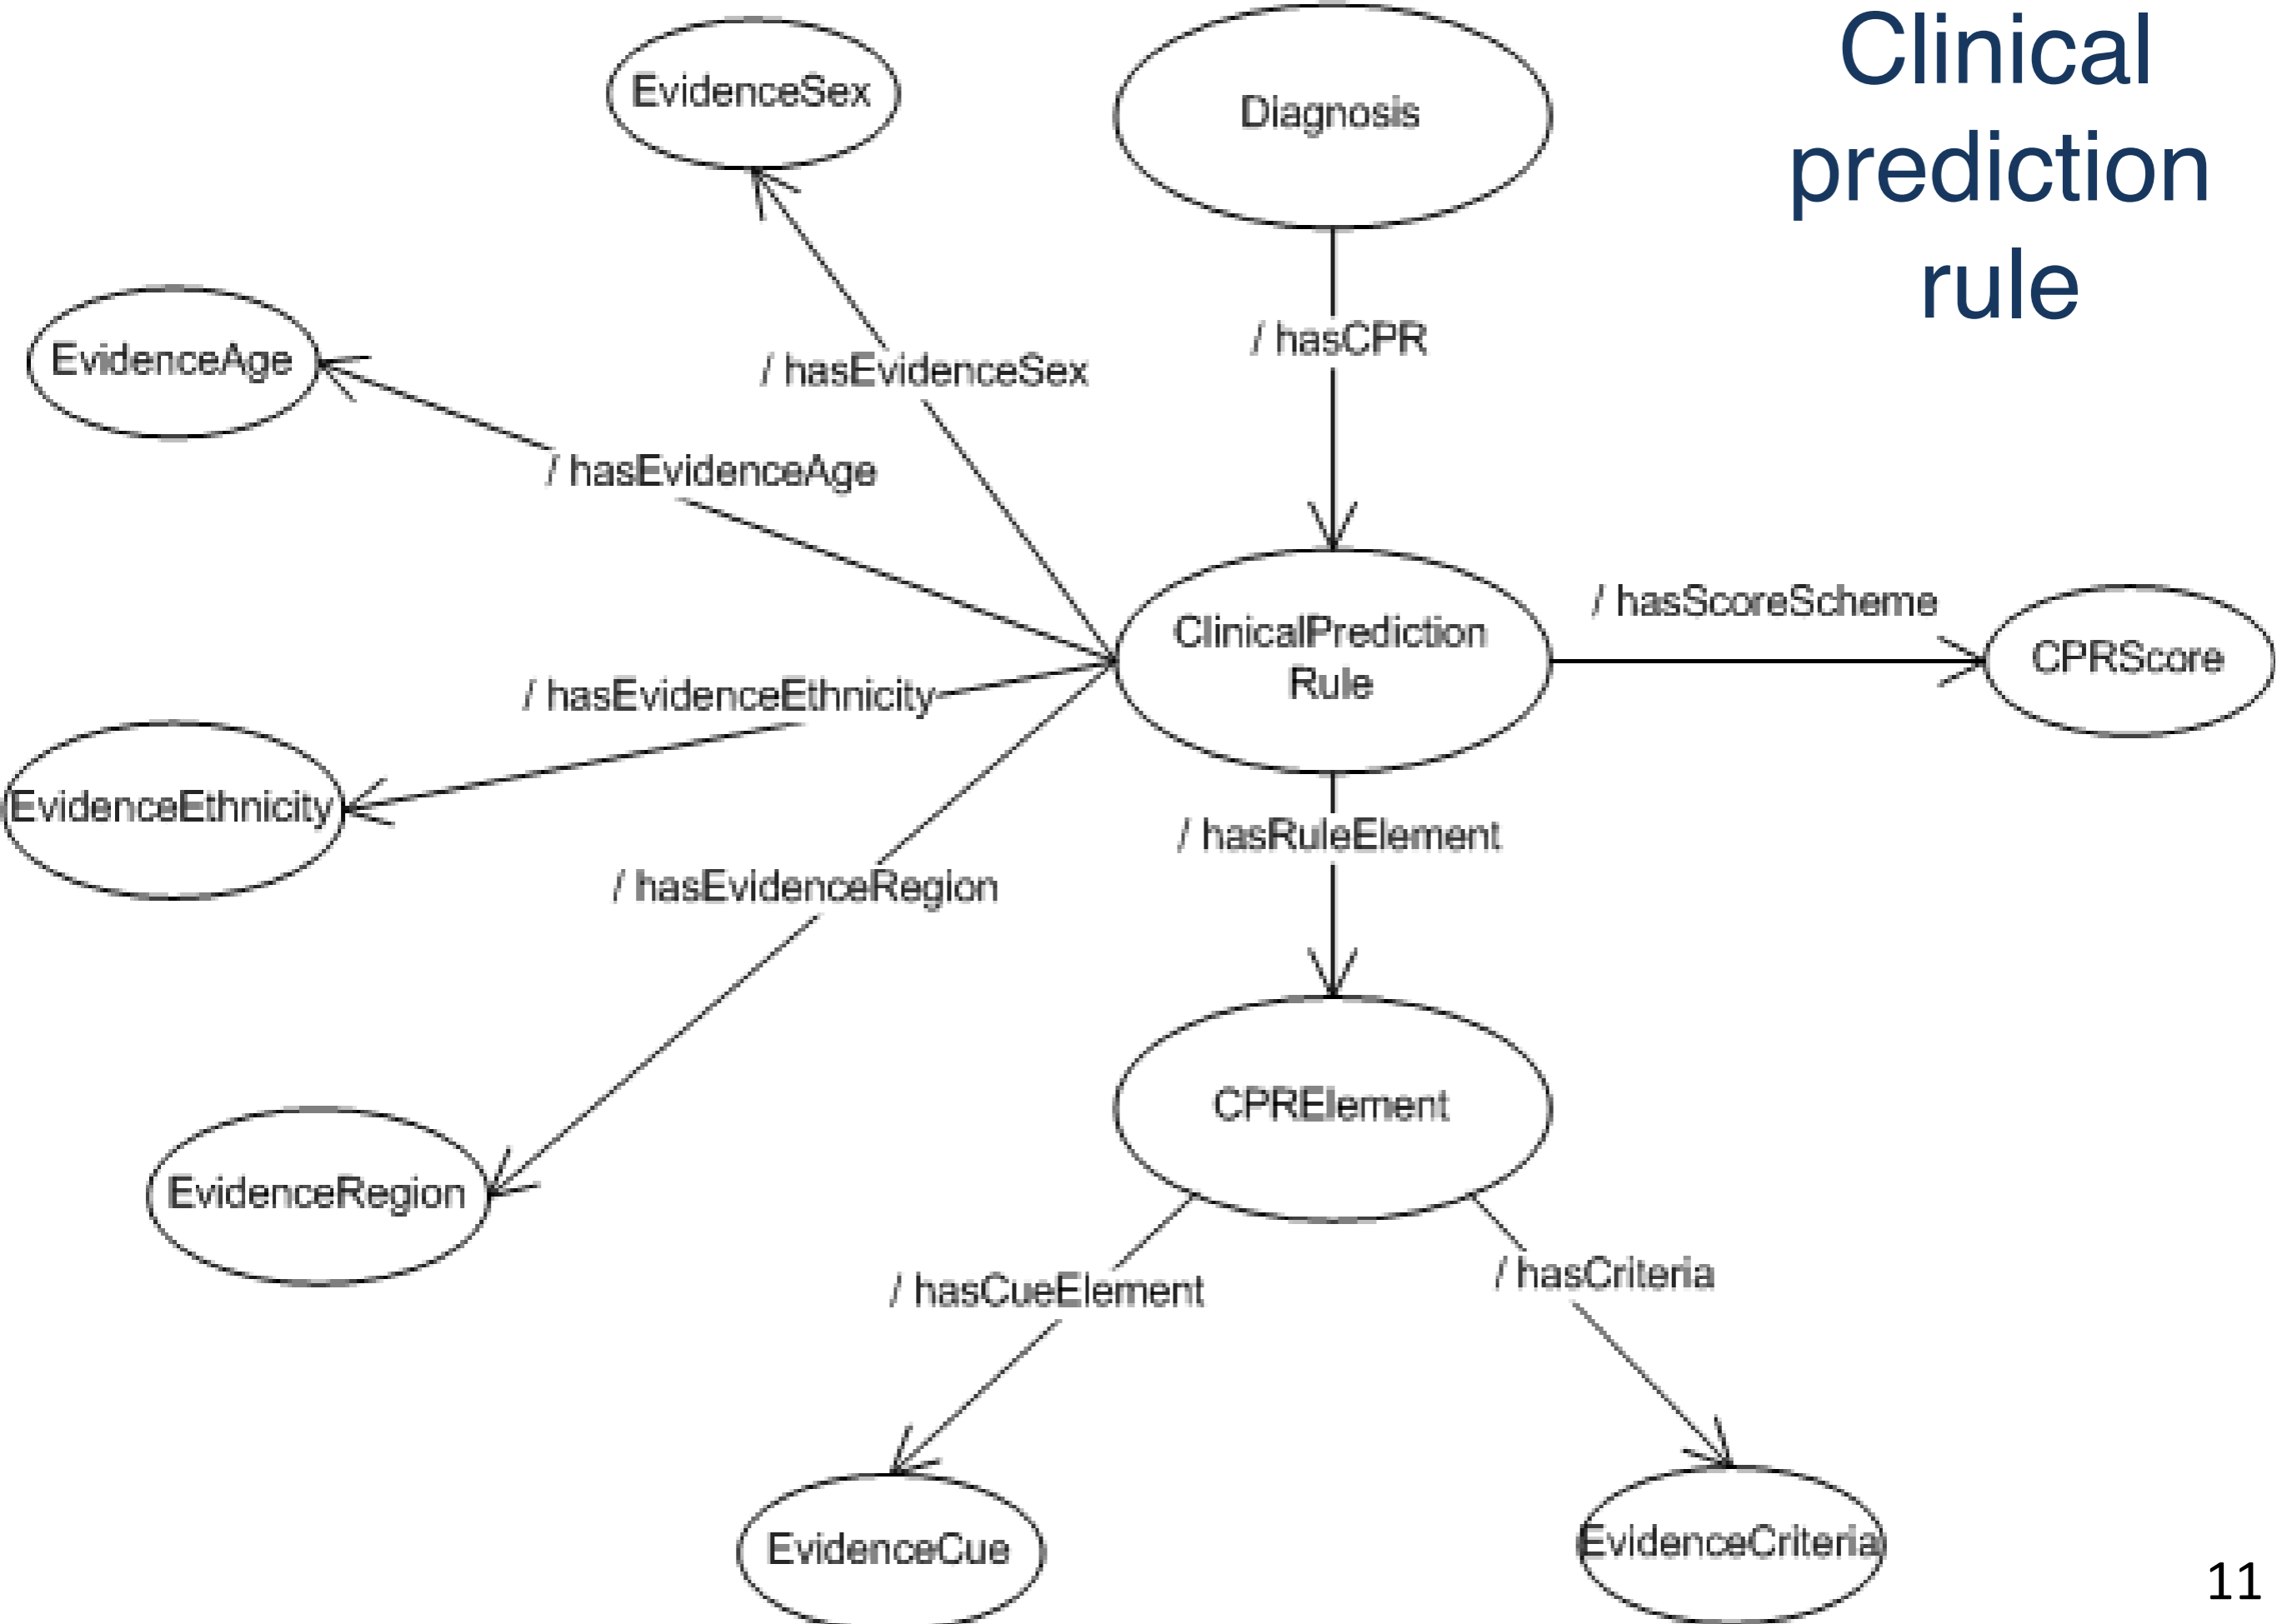

Object property assertions +

- hasRisk PreviousUTI
- hasSign UrineCloudiness
- hasRisk NewSexualPartner
- hasSymptom Dysuria
- hasSymptom Fever
- hasSymptom Nocturia
- hasNotSymptom VaginalDischarge
- isDifferentialDiagnosisOf AbdominalPainRFE
- hasTest PregnancyTest
- hasTest DipstickUrinalysis
- hasSign UrineSmell
- hasRisk SexualActivity
- hasNotSymptom Vomiting

# Decision Support Tool

*The Decision Support Tool will provide patient-specific advice at the moment of consultation so that clinicians are able to access and quantify likely differential diagnoses framed in terms of diagnostic probability and alternative diagnostic possibilities.*

## Decision Support Tool Characteristics:

- Embedded within the eHR
- Triggered by a 'reason for encounter'
- Collects ontologically controlled diagnostic cue data
- Presents diagnostic prompts based on queries to a clinical evidence service
- Alerts/suggests for potential missed diagnoses

# Bridging the knowledge gap

Lang et al 2007, "Knowledge Translation: Closing the Evidence-to-Practice Gap", *Annals of Emergency Medicine*

- How TRANSFoRm bridges the gap:
  - Creation of shared clinical models at the system evidence level
  - Generation and analysis of underlying evidence from electronic sources
  - Providing infrastructure to support rapid dissemination, validation and impact analysis of clinical evidence in practice
